

UNICARP III Indicator

Instructions Manual

Thank you for purchasing our product, UNICARP III, placed in a compact, rubberized and almost unbreakable body. It follows our previous, successful UNICARP series and which offers many extra features for your fishing. This third generation of UNICARP indicators was designed by a Czech designer to meet the demands of modern fishermen. Its control is completely intuitive and it offers a choice of 6 LED colours and their intensity control.

Technical parameters:

- Microprocessor-controlled digital technology
- MC - multicolour function with high-visibility LEDs and their balance control
- Volume control: 0 + 4 levels
- Tone level control: 5 levels
- Sensitivity control: 5 levels
- LEDs with a 20-second memory
- Standby LEDs, night lighting
- Integrated output for swinger, snag with 20s of memory
- **Incognito** feature – receiver only indication
- **Rod theft alarm (Alarm)** – prevents rod theft
- **Incognito + Alarm** simultaneously
- **Lighthouse** function – for localization of the catch area during bait distribution
- **Drop back** function – indicated by "S" LED panel and sound
- Black chrome locking screw with strong rubber band
- Waterproof and rubberized indicator body
- Operating frequency for wireless transmission: 433MHz with distance of up to 200m
- Operating voltage: 9V (9V battery)
- Warranty: 3 years

Functions and settings

How to turn on / off the indicator

Turn on: move the on/off lever to the right – a short tone will be heard.

After the "S" indicator is turned on, the panel indicates that the **9V battery is charged**.

Turn off: move the on/ off lever to the left.

How to set the desired basic functions

The potentiometers on the front allow you to change the **Volume ("V")**, **Tone ("T")** and **Sensitivity ("S")**.

By a slight turn it is possible to set 5 levels for each function, including switching off the sound completely. The option value is indicated by the LEDs on the "S" panel.

Drop back function

The "S" panel can identify whether the line is being unwound or wound. It detects a drop by a reverse tone and by an LED direction indicator (flashes in the direction of travel) on the "S" panel and on the receiver.

Night lighting function

Switching on the **«ZICO»** button activates the required (night) illumination modes - lightly press ●.

Options and their order (actions) when biting:

- a) memory diode, illuminated roller + "S" panel (everything goes out after 20s)
- b) memory diode, illuminated roller + "S" panel (the roller stays on after 20 seconds – night light)
- c) only memory LED + roller (everything goes out after 20 seconds)

Lighthouse function

Press and hold ●●● the **«ZICO»** button.

The **Lighthouse** function is used to locate the fishing area, for example, during bait distribution for up to 100m. This option turns on a bright LED that emits pulsing white light. Press and hold ●●● the button again to turn off the option. If the function is turned on or off, a short tone sounds as a confirmation.

Tip: If you are distributing bait at a longer distance, turn on other UNICARP III indicators in the same way. Turn off this option to save the battery when the bait distribution is finished.

UNICARP III Main Functions

Invisible function

The **Invisible** feature is based on the experience of using indicators in a location that is unfriendly to their use (e.g. next to a fisherman who does not want to be disturbed by the surrounding sounds). With this option on, only the receiver works. It is switched on by holding ●●● the «I» button (3s). A short tone will sound to confirm the activation of the function. Press and hold ●●● the same «I» button again to turn off the option.

Anti-Theft Alarm function

The UNICARP III indicator uses an intelligent system to alert you when the rod is removed from the indicator. To activate the alarm, place the rod on the indicator, hold ●●● the «A» button for 3 seconds until you hear one short tone. The anti-theft alarm is now activated. De-activate the alarm again by holding ●●● down the «A» button (3s) and three short tones will sound to confirm it.

Incognito + Alarm functions simultaneously

Unlike the previous types of UNICARP, this new feature offers the possibility of being **"invisible"** in your fishing place while knowing that someone wants to steal your rods. To activate it, press and hold the ●●● «I» and «A» buttons (3s) at the same time – a short tone will be heard. Switch off the function in the same way, or switch **the on / off** lever to return to the basic indicator settings.

Colour function

A special function for UNICARP III. Select the indicator colour simply by using the **«C»** button (press it lightly). The colour selection will be matched automatically to the colour-channel on the triggered receiver. In total, you can select 6 colours (channels) for the individual **Unicarp III** indicators (yellow, green, blue, red, purple, white). After being selected, the colour is stored in the memory and is active when the indicator is turned on afterwards.

Balance function

After dark, you can select the brightness of the diodes so that their light does not disturb you when fishing. The desired LED intensity is now simply set with the «B» button (press it lightly). This option allows you to set a total of 5 diode intensity levels.

How to replace the battery

The UNICARP indicator is powered by a 9V battery. Replacing can be done by removing the battery compartment cover. Replace the cover properly after inserting the new battery. This ensures the water resistance of the battery compartment. We recommend removing the battery if the indicator is not to be used for a longer period (during the winter). If contacts are oxidized by a damaged battery, the warranty cannot be applied. You will notice an insufficiently charged battery on the "S" panel when the lever is turned to the "on" position, or by the indicator's flashing that prompts you to replace the battery.

Each Unicarp III Bite Indicator only works with a coupled UNICARP receiver (type I, II, and III)

Receiver UNICARP III

Technical parameters

- Microprocessor-controlled digital technology
- On / Off switch \odot
- Volume control + and – (8 levels)
- Vibration mode
- 6 different LED colours (20-second bite memory)
- Operating voltage: 9V (flashing white LED indicates that battery must be replaced)
- Operating frequency for wireless transmission: 433MHz (range: up to 200m)

Receiver settings and functions

How to turn the receiver on and off

Insert the battery and press ●●● the \odot N side button for 3 seconds.

How to Adjust Volume and Vibration Mode

You can adjust the volume and vibration with the side buttons (– and +)

Pairing (coupling the indicator with the receiver)

The indicators are already coded by the supplier at the time of purchase. *If you need to couple another indicator, hold the + and – buttons on the side of the receiver simultaneously for 3–6 seconds. Then use the ON/OFF lever to turn on the receiver to be coupled. Other indicators must be turned off during coupling. This completes the coupling and the selected position is automatically saved. With **UNICARP***

III the position on the receiver is selected by choosing the indicator colour with the «C» button. If you select the same colours on the indicators in the set, they will be coupled with the same receiver channel, which is not recommended.

ATTENTION

To save power, the main unit should be turned off if the device is not used. The battery should be removed if the device is not to be used for a longer period. We recommend using alkaline batteries. Each UNICARP product includes a "9V sample battery," which, however, does not have the qualities of an alkaline 9V battery.

EC Declaration of Conformity

Section 13 paragraph 2 Act No. 22/1997 Sb., as amended

We, ZICO CZ s.r.o.
Pražská třída 8, Hradec Králové 50004, Czech Republic
IdNo.: 260 07 606

as importers, declare at our sole responsibility that:

Product: Bite indicator
Type: UNICARP II

conforms to these standards:

EN 300220-1:2012
EN 300220-2:2012
EN 301489-1:2011
EN 301489-3:2013
EN 62479:2010
EN 60950-1:2006/A2:2013

and to these Government Regulations, as amended (NV) and EU Directives 2006/95 / EC:

| | |
|-----------------|--|
| NV 616/2006 Sb. | 2004/53/EU – including amendments |
| NV 481/2012 Sb. | RoHS 2011/65/EU – including amendments |

Conformity assessment was carried out in accordance with the procedure of section 12, par. A) of Act No. 22/1997 Sb., as amended.
